Contain Every Worm!!! Trace Every Source!! Raise Reward Awareness!

STATUS OF ERADICATION AND OF REPORTED CASES OF GWD WORLDWIDE DURING JANUARY-JULY 2014

Three of the four remaining endemic countries have provisionally reported a total of 53 cases during January-July 2014, which is a reduction of 51% from the 109 cases reported in January-July 2013 (Figure 1, Table 1, Figure 2); 39 (74%) of this year's cases so far were reportedly contained. South Sudan reported 43 cases, Chad 8 cases, and Ethiopia 2 cases. Mali, which reported 4 cases in January – July 2013, has reported no cases during this period of 2014, and Sudan, which reported 2 cases in June 2013 but is not endemic, has reported no cases so far this year.

*Provisional

§Reports include Kayes, Koulikoro, Segou, Sikasso, and Mopti, Tinbuku and Gao Regions; in late April, the GWEP deployed a coordinator to Kidal to oversee the program during the transmission season (for the first time since 2012).

^A Carter Center consultant, deployed to Kafia-Kingi area in South Darfur in March, implemented active village-based surveillance in Kafia-Kingi and four other at-risk villages, and began monthly reporting.

Figure 2

Number of Indigenous Cases Reported During the Specified Period in 2013 and 2014*, and Percent Change in Cases Reported

* Provisional: Numbers in parentheses denote months for which data received, e.g., (7)= January- July

§ Reports include Kayes, Koulikoro, Segou, Sikasso, and Mopti, Tinbuktu and Gao Regions; in late April 2014, the GWEP deployed a technical advisor to Kidal to oversee the program during the transmission season (for the first time since 2012).

^ Under pre-certification of eradication; reported three cases in 2013 from Kafia Kingi area of South Darfur State. A Carter Center consultant was deployed to Kafia-Kingi area in March 2014 to implement active village-based surveillance and interventions in Kafia Kingi and four other at-risk villages; all began reporting monthly as of the end of March.

and National Program Manager of the SSGWEP Mr. Samuel Yibi Makop personally launched the SSGWEP's cash reward (500 South Sudanese Pounds US\$125 for persons self-reporting with a case of Guinea worm disease if the case is confirmed, if the case is detected and reported by an informant, both the patient and the informant receive one half of the award), by visiting several endemic villages during a ten day tour of Jie, Mogos, Nurus, Kauto and Lotimor Payams of Kapoeta East County. The cash reward system was rolled out in other areas of South Sudan in April and May. Dr. Itto paid the first recipient of the cash reward during a big community award ceremony in Kauto Payam. On June 14 the SSGWEP held a day workshop to educate 20 local journalists about the program.

United States Ambassador to South Sudan the Honorable Susan Page visited the SSGWEP compound in Kuron North (Kapoeta East County) on June 4, accompanied by Emeritus Bishop Paride Taban. Ambassador Page spoke to the entire team of Field Officers, Program Officers and Technical Advisors for the two Kuron sub-offices during her visit and congratulated them on the progress of the eradication program. The team presented the ambassador with a ceremonial beaded pipe filter.

in-country staff, and representatives of WHO. He stressed that the GWEP should be the lead and the umbrella for all GW activities, and he encouraged

Status of Intervention Indicators in 72 Priority Villages during 2013-2014

ETHIOPIA: SECOND OLDEST GWEP STILL ON-GOING

Ethiopia, which began its ~~Ethiopia~~ ~~Dracunculiasis~~ Eradication Program (EDEP) in 1994 with 1,252 cases of the disease reported ~~year~~, has reported 2 cases in June 2014 and zero cases in July, after 11 consecutive months with zero ~~cases~~ reported. Both of the ~~cases~~ were contained, and are at the Case Containment Center in Pugnido (Table 4). ~~Two~~ specimens from both patients have been sent to CDC for examination. One of the cases was a 65 year old male who was detected in Gambella Town; the other was a 12 year old male detected ~~in~~ ~~Wichini~~ village in Gog district. The source of both cases is alleged to be Wichini, but the ~~most~~ recent known case of GWD in that village was in 2010. Wichini Village has safe sources of ~~drinking~~ water. Ethiopia ~~has~~ 173 villages under active surveillance in Gambella Region ~~of~~ Gog district (72 villages), all of Abobo (79), and 22 villages in Itang. Ethiopia reported 7 cases in January-2013, so this is a reduction in cases of 71%.

MALI: OLDEST GWEP STILL ON-GOING

Mali, which began its GWEP in 1993 with 2,011 cases, reported 4 cases, one of which was contained, in January-July 2013 and has reported no cases in ~~July~~ ~~July~~ 2014. The peak season for transmission of GWD in Mali is July-December
